

Adler

Funded bounties. On-chain escrow.
Settled on Solana.

LIVE ON DEVNET

Solana Colosseum Frontier · iOS · May 2026

Online bounties still run on trust.

The money sits with one party.

Bounty boards, tip jars, freelance gigs — they all share the same failure mode. Funds live with one side until someone, by hand, off-platform, with no recourse, decides to release them.

BOUNTY BOARDS

Discord threads and Twitter replies. No escrow, no record, no enforcement.

TIP JARS

Buyer-funded, seller-trusting. Refunds happen only if the platform feels like it.

FREELANCE

PayPal, Venmo, wire. Days to clear, easy to claw back, no on-chain trail.

The unlock is finally here.

Embedded wallets + Anchor escrow.

A bounty marketplace stayed unbuildable until two pieces clicked into place. Privy ships email-OTP-to-Solana wallets on mobile. Anchor lets a program own funds with cancel, settle, and refund paths enforced in code — not goodwill.

01 · ONBOARDING

Email-OTP. Wallet on first tap.

Privy provisions an embedded Solana wallet from a Google sign-in. Bridged to Firebase Auth — same uid mobile and chain.

02 · SETTLEMENT

Funds escrow on Solana.

Posters lock SOL into a program-owned PDA. Winners get paid in one transaction. Refund and cancel are program code, not promises.

\$700B of work moves through bounty-shaped channels.

None of it settles on-chain.

Freelance contracts, dev bounties, creator gigs, content tasks — every category is bounty-shaped, and every category still settles on PayPal, Venmo, Wise, or trust. Crypto payments are eating the long tail; bounties are the wedge.

\$455B

GLOBAL FREELANCE

Statista 2024. Growing 16% YoY through 2030.

\$250B

CREATOR ECONOMY

Goldman Sachs. ~50M active creators worldwide.

\$120M+

WEB3 BOUNTY VOLUME

Open-source, DAO, and dev bounties paid in crypto.

<400ms

SOLANA FINALITY

Sub-cent fees. No banks. Rails finally caught up.

WEDGE

Mobile bounties on Solana. Email-OTP onboarding closes the wallet gap. Anchor escrow closes the trust gap. The market is moving — the rails just arrived.

Post a bounty in SOL.

Pick the winner. The program pays out.

Adler is a bounty marketplace. Posters fund SOL into an Anchor escrow. Submitters send photos, videos, or links — one shot each. The poster picks a winner and the program settles on-chain, minus a small protocol fee.

FOR POSTERS

Post funded bounties.

Lock SOL into a PDA escrow. Three submission kinds: photo, video, or link. Every entry lands in one review screen.

FOR SUBMITTERS

Submit. Get paid.

One submission per bounty. If the poster picks yours, SOL hits your embedded wallet on-chain in a single transaction.

FOR EVERYONE

Trustless by default.

Cancel before submissions land. Refund after 120 days if no winner is picked — a server keypair sweeps expired bounties on schedule.

Four instructions. One Anchor program.

Everything the marketplace does is one of four on-chain calls. Funds never leave a program-owned PDA until the program itself moves them.

01

POSTER

create_bounty

Lock SOL into a program-owned PDA. Set submission + review windows. Funds are untouchable until the program says otherwise.

02

POSTER

settle_manual_bounty

Pick a winning submission. The program transfers SOL to the winner and skims a fee to the on-chain treasury.

03

POSTER

cancel_bounty

Before submissions land, the poster can cancel. The program returns every lamport to the funder. No exit fee.

04

PERMISSIONLESS

refund_bounty

After expiry with no winner, anyone can call refund. A scheduled Cloud Function sweeps it automatically.

Five tabs. Twenty-three screens.

Wired end-to-end on devnet.

Browse · Inbox · Wallet · Leaderboard · Profile. Sign in with email, post a funded bounty, submit a photo / video / link, settle a winner — every step calls the live Anchor program.

23

SCREENS

Sign-in, browse, post, submit, settle, leaderboard, profile, settings.

13

SERVICES

Bounties · submissions · profiles · groups · notifications · leaderboard.

4

ON-CHAIN IX

create · settle · cancel · refund. One Anchor program, one PDA per bounty.

3

SUBMISSION KINDS

Photo from camera. Video up to 60s. Link with URL validation.

FLOW Email-OTP → Browse → Post & fund → Submit (photo · video · link) → Pick winner → On-chain settle

Web2 holds the bag.

Web3 needs a power user. Adler does neither.

Upwork / Fiverr

WEB2

Custodial. Trust the platform, wait for payout.

NET-7 to NET-30 payouts · 10–20% fees + FX · No on-chain trail or escrow

Superteam Earn

WEB3 · BOUNTY BOARD

Trustworthy hosts pick winners by hand.
Settlement happens off-platform.

Wallet-native users only · Manual settlement, off-chain · No program-enforced refund or cancel

Replit Bounties

WEB2 · DEV BOUNTIES

Closest spec to Adler, but locked to Replit accounts and USD payouts.

Replit-only audience · USD payouts, no crypto rails · No public on-chain record

Adler

WEB2 UX · WEB3 SETTLEMENT

Email sign-in · Privy embedded Solana wallet on first tap · Anchor escrow (settle · cancel · refund) enforced in code · Manual settlement by the poster · Live on devnet today

SHIPPED

2-week sprint. Live on devnet today.

iOS app, embedded wallets, an Anchor escrow program, a scheduled refund sweep, a leaderboard, push notifications — every piece wired end-to-end. One submission per user, one PDA per bounty.

SHIPPED · APR-MAY 2026

- ✓ iOS app — Expo, NativeWind, Privy auth
- ✓ Privy embedded Solana wallets, end-to-end
- ✓ Anchor program live on devnet (mainnet-beta deployed)
- ✓ Funded bounties: create · settle · cancel · refund
- ✓ Three submission kinds: photo · video (≤60s) · link
- ✓ Leaderboard: SOL won · wins · submissions
- ✓ Permissionless refund sweep via Cloud Function

NEXT 90 DAYS

- External audit of the adler-escrow program
- Mainnet launch + USDC settlement
- Auto-mode: Gemini Vision verifies photo submissions
- Group-scoped bounties (closed cohorts)
- Reputation graph + creator portfolios

From devnet to a marketplace.

Six months. Four milestones.

Q2 · 2026

AUDIT

Audit & mainnet

External audit of the Anchor program.
Deploy to mainnet-beta. First 50 funded bounties, real SOL.

Q3 · 2026

USDC

USDC settlement

Mint-aware escrow. USDC alongside SOL. Receipt PDFs for posters.

Q3 · 2026

ML

Auto-settle (vision)

Optional auto-mode for photo bounties. Gemini Vision validates the prompt. Manual stays default.

Q4 · 2026

GROUPS

Groups & reputation

Closed cohorts (DAO subteams, brand creator groups). Reputation graph on top of the leaderboard.

NORTH STAR

The default place to post any bounty on the internet — and the only one where the program owns the funds.

— CLOSE

Built for Frontier. Live on devnet today.

A funded bounty marketplace on Solana, shipped end-to-end during the Colosseum Frontier sprint. Email-OTP onboarding, Anchor escrow, manual settlement — every path wired on a real program.

FOUNDER

Maru · @them2dt

Solo founder. Designer-engineer. Five mobile apps shipped, two on the App Store.
Built every pixel and every transaction in this submission.
